CARRER OBJECTIVE

I am a B.E graduate in Artificial Intelligence and Machine Learning with hands-on experience developing enterprise AI applications, full-stack web platforms, and Retrieval-Augmented Generation (RAG) systems during my internship at Algoleap Technologies. Experienced in building scalable backend services, responsive frontend applications, and integrating Large Language Models (LLMs) to solve real-world business problems. Passionate about software engineering, Generative AI, and designing intelligent, reliable, and user-centric applications while continuously learning modern technologies.

SKILLS

Programming Languages	: Python, JavaScript, SQL, HTML, CSS
Frontend	: React.js, Next.js
Backend	: Node.js, REST APIs
Databases	: PostgreSQL, pgvector, MySQL
AI & Machine Learning	: Generative AI, Retrieval-Augmented Generation (RAG), Prompt Engineering, Vector Databases, Machine Learning
Soft Skills	: Problem-Solving, Communication, Attention to detail, Adaptability, Teamwork, Collaborative

EDUCATION

New Horizon College of Engineering (NHCE), Bengaluru

Nov 2021 – May 2025

B.E, Artificial Intelligence and Machine Learning

CGPA: 7.14

PROJECTS

Agentic AI Tax Automation – Tax Intelligence POC Suite

- Built a suite of multi-agent orchestrated POCs for enterprise tax workflows (Python, Flask) covering tax law change monitoring, customer-specific forms, YoY comparison, tax operations dashboards, residency & treaty evaluation, dependency impact, and document extraction.
- Implemented specialized agent modules (discovery, verification, legal analysis, impact assessment, regime optimization, treaty evaluation, report generation) coordinated through orchestrator pipelines using pydantic data models.
- Designed rule-driven simulation logic for tax residency classification, cross-form dependency analysis, and schema comparison to demonstrate end-to-end agentic decision workflows.

Missing Information – AI Tax Audit & Gap Analysis Platform

- Architected a multi-tenant, white-label AI chatbot platform using Node.js and PostgreSQL (pgvector), ensuring strict tenant isolation and scalable enterprise deployment.
- Implemented a Hybrid RAG system combining vector similarity search and SQL keyword fallback to improve contextual accuracy and reduce irrelevant LLM responses.
- Designed a dual-provider AI routing strategy (OpenAI GPT-4o + Groq Llama-3) to optimize inference latency, cost efficiency, and production performance.

NeuralBot – Multi-Tenant AI Chatbot System

- Architected a multi-tenant, white-label AI chatbot platform using Node.js and PostgreSQL (pgvector), ensuring strict tenant isolation and scalable enterprise deployment.
- Implemented a Hybrid RAG system combining vector similarity search and SQL keyword fallback to improve contextual accuracy and reduce irrelevant LLM responses.
- Designed a dual-provider AI routing strategy (OpenAI GPT-4o + Groq Llama-3) to optimize inference latency, cost efficiency, and production performance.

AlgoChat – Enterprise RAG Chat Application

- Engineered a corporate-grade AI chat platform featuring multi-model orchestration, low-latency streaming, and advanced conversational logic.
- Designed automated ingestion for PDF, DOCX, and unstructured imagery to power RAG architectures, refining output precision via prompt engineering and vector-based retrieval tuning.

Idea Management System

- Developed a full-stack Idea Management System using React and Node.js to automate the end-to-end lifecycle of organizational ideas with role-based workflows and RESTful APIs.
- Engineered a multi-stage workflow engine with automated triage logic, dynamic dashboards, and structured relational data management.

Nike Supply Chain Intelligence – AI-Powered Product

- Developed proof-of-concept AI applications for supply chain intelligence featuring conversational AI, intelligent recommendations, and enterprise product insights.
- Implemented Agentic AI workflow concepts involving orchestration, contextual reasoning, and LLM-driven interaction pipelines, enhancing prompt reliability across iterative versions.

Algoleap Agentforce Readiness Scorecard

- Developed a SaaS-based AI readiness assessment platform with automated scoring workflows, interactive dashboards, backend integrations, and PDF report generation.
- Built responsive frontend components and workflow automation for a seamless user experience.

Algoleap Website Transformation – WordPress to Next.js Migration

- Assisted in transitioning the corporate web presence from WordPress to Next.js, using a modular architecture with reusable components to optimize maintainability and performance.
- Participated in cross-functional efforts for content migration, responsive UI engineering, and refinement of operational workflows.

EXPERIENCE

Junior Engineer, Algoleap Technologies

Jan 2026 – Present

Contributed to enterprise and presales-focused AI proof-of-concepts at Algoleap, spanning agentic tax automation, AI-powered document intelligence, and conversational AI platforms. Built multi-agent orchestrated workflows for a tax intelligence POC suite and developed an AI tax audit platform using Azure OpenAI-based agentic analysis, rule-driven gap detection, and automated document processing. Also contributed to a multi-tenant AI chatbot platform, an enterprise Idea Management System, and RAG-based document ingestion pipelines, working across Python (Flask), Node.js, PostgreSQL, and REST APIs.

AI - Data Quality Analyst, Rooman Technologies

Feb 2025 – May 2025

Gained hands-on experience in data cleaning, modeling, visualization, and collaboration using Python and Agile practices during an internship at Rooman Technologies.

Certifications & Courses

- **Python Full Stack Web Development**, Koushalya Tech *Jul 2023*
- **DevOps**, Koushalya Tech *Feb 2024*
- **JavaScript Essentials 1**, CISCO *Apr 2024*
